

My Perfect Pet Supplements

To the extent possible, we use natural, fresh whole foods that are the most digestible by dogs and cats and add vitamin and mineral supplements only where needed to meet the desired nutrient profiles. All supplements are highest pharmaceutical quality FCC (human) grade and USA sourced. We trace every supplement back to its original source and never use any imported or feed grade vitamin or mineral packs.

All vitamins are derived from natural sources. Studies show the absorption and bioavailability of certain minerals to be significantly higher when compounded or chelated (compared to natural sources such as clay, etc.) so our mineral supplements may be chelated or compounded to be more easily digested and absorbed.

Choline Chloride: Choline is bound to chloride for easier digestibility and absorption. Our primary sources of choline include eggs, beef, chicken, turkey, and liver. When necessary for a particular blend, we add trace amounts of Choline Chloride to meet AAFCO nutrient profiles.

Copper Amino Acid Chelate: Trace mineral copper chelated for better absorption. Primary food sources include heart, beef, turkey, chicken, liver, whole baked potato, and whole grain brown rice. When necessary for a particular blend, we add trace amounts of Copper Amino Acid Chelate to meet AAFCO nutrient profiles.

Ferrous Sulfate: Highly absorbable iron supplement, gentle on the digestive tract. Primary food sources include chicken, turkey, beef, liver, whole baked potato, and whole grain brown rice. When necessary for a particular blend, we add trace amounts of Ferrous Sulfate to meet AAFCO nutrient profiles.

Fish Oil: Organic Fish Oil derived from anchovy (*Engraulis ringens*), a deep sea-harvested small planktivorous pelagic fish, is rich in Omega 3 fatty acids EPA (Eicosapentaenoic acid) and DHA (Docosahexaenoic acid). Our fish oil is in its natural TG (triglyceride) form and is preservative-free.

Kelp: Organic dried Norwegian kelp harvested in the Atlantic Ocean off the coast of Maine, rich in iodine and various macro and micronutrients.

Safflower Oil: Organic Safflower Oil is derived from the natural safflower plant and is rich in essential fatty acids, especially linoleic acid.

Tricalcium Phosphate: Highly absorbable source of calcium and phosphorus, certified human grade, kosher, free of fluoride, lead, and other potentially toxic minerals. While calcium is naturally present in most whole food, calcium and phosphorus must be supplemented to meet AAFCO nutrient profiles. Ground bones and bone meals contain calcium and phosphorus, but may also contain high levels of fluoride, lead, or other minerals stored in bone. Nutrient profiles for ground bones may vary from batch to batch due to the variation of mineral content in the bones. Cooked ground bones are more difficult for dogs to digest and can be abrasive in the dog's digestive tract. For these reasons we do not use ground bones.

Vitamin D: D3 as Cholecalciferol, a natural source of vitamin D.

Vitamin E: D-alpha tocopherol, a natural source of vitamin E. Food sources include Safflower Oil, Fish Oil, and Fresh Vegetables.

Zinc Amino Acid Chelate: Trace mineral zinc chelated for better absorption. Primary sources include chicken, turkey, beef, whole egg, liver, whole baked potato, and whole grain brown rice. When necessary for a particular blend, we add trace amounts of Zinc Amino Acid Chelate to meet AAFCO nutrient profiles.
